Medical Comments: While deburring a cavity flange (port) the deburring tool slipped causing the employee to cut his right hand on the burr on the 2nd knuckle. Three stitches were needed. No gloves were worn.

ESH Comments: The incident occurred inside the MI-8 Service Building where the employee was working on a large copper cavity. The employee had cut off a flange from one of the cavity's ports and was in the process of deburring the edges of the port using a handheld deburring tool. While he was performing the deburring, the tool slipped and the second knuckle of his right hand hit the top edge of the port, resulting in a laceration. He went to the Medical Department where he received 3 sutures to close the wound. He returned to work with restrictions that do not prevent him from performing his routine job functions. The employee was not wearing gloves while performing the work.
